Exercise 2b: ECHO SERVER USING TCP

Develop a socket program to establish a client server communication. The client sends data to server. The server in turn sends the same message back to the client. Transmit multiple lines of text. In client side display the echoed message. In server side display the message which is echoed to client.

Sample Input Output

Client Side

Client: "hi this is from ssn.

                        -----------------"

Echoed Message: "hi this is from ssn.

                        -----------------"

Server Side

Message from Client: "hi this is from ssn.

                        -----------------"

Message echoed to client: "hi this is from ssn.

                        -----------------"
